

The Modern Home is *Lovekin-ized*

Construction

The *Lovekin* boiler, constructed with a central heating chamber and a corrugated heating flue, is combined with the gas heater, forming a single, assembled unit. Around the corrugated flue is a circulation jacket. When the burner is automatically lighted, the thin sheet of water between the flue and jacket heats and rises, which starts the circulation in the tank.

The heat from the burner is retarded in its passage up the flue by a spiral heat baffle inside the flue. This baffle so obstructs the passage of hot air that its heat is thoroughly absorbed by the surrounding water.

"Now Madam, your hot water troubles are at an end."

HOT WATER is always on tap

The *Lovekin* burner is small and splendidly designed. The openings, through which the gas flows, are horizontal. This prevents dust or dirt falling into these openings and clogging them.

The boiler is set on an enclosed base made of heavy, cast iron, which is supported by three one-inch iron legs with floor flanges. The burner is secured in the base, and a door provided so the burner may be readily removed for cleaning out dirt and other deposits that collect in all gas burners in the course of time.

When the doors on the base are closed, only enough air for proper combustion of the gas enters the combustion chamber, resulting in a saving of gas.

Positive action thermostat

The *Lovekin* Sylphon Thermostat, which controls the temperature of the water in the tank, is a patented device which has been fully tested, and has proved highly satisfactory throughout years of practical use.

The *Lovekin* is provided with a chimney flue connection, and a draft hood, or vent, to prevent excess drafts passing up or down the flue. These features insure a safe, silent, and odorless operation.

The boiler insulation is composed of several layers of heavy, corrugated, air cell asbestos, which pre-

SOLVING YOUR HOT WATER TROUBLES

Lovekin Storage Automatic Water Heater

You can *always* have hot water with a ***Lovekin***

THE Lovekin Storage Automatic Gas Water Heater will give ideal, abundant, hot water service all the year round. No dust, ashes, or waiting, but a simple, economical means of supplying good hot water every hour, day or night, in sufficient quantity for every household want.

The Lovekin Automatic Water Heater is of the storage type. It keeps a tank of steaming hot water ready whenever you need it. When you draw hot water from any fixture, cold water enters the top of the tank and is carried through to the bottom. The burner is automatically lighted, and the hot water you have used is soon replaced. But, the gas burns only until the fresh supply of water has reached the proper temperature, when the Lovekin Thermostat turns it off. Small quantities of hot water may be drawn from the tank without bringing on the gas.

The Lovekin operates automatically. After the heater is put into operation, you could forget it is there, were it not for the fact that the *hot water* which is always on tap, reminds you of the good job

The Modern Home is *Lovekin*-ized

being done in your basement or laundry—without attention by any member of your household.

The *Lovekin* is constructed of the finest materials obtainable and so designed that it will give you lasting satisfaction, and contribute greatly to the health and comfort of your family.

Economical of time, patience, and gas

The *Lovekin* Heater can be operated without changing to a larger meter or larger gas service pipes. The rate of gas consumption is therefore surprisingly low, and you are assured of an easy and inexpensive installation.

Heating water the *Lovekin* way permits maximum heating efficiency from the small amount of gas that is used to heat the incoming water. It allows the cold water to heat slowly, because there is an abundance of hot water in the tank ready to be used.

You never need say—"Oh, will this water ever get hot?"

HOT WATER is always on tap

The water is kept hot by the thick, heat-retaining jacket around the tank, which acts the same as the covering on a vacuum bottle, and reduces heat loss to a minimum.

The *Lovekin* Storage system also permits a full flow from all hot water faucets at once, the same as from the cold.

No copper coils

There are no copper coils or cast iron heating surfaces or spreaders in the *Lovekin* Storage Automatic Heater. It is suitable for use where water is bad or deposits lime. There is nothing in the heater to cause trouble which results in inconvenience and expense.

HOT WATER is always on tap

The Source of Genuine Satisfaction and Comfort

"See, isn't it wonderful? Hot water all the time, like this!"

THINK how much more pleasant it will be to have *hot water* always on tap. No household refinement will give you greater satisfaction, day in and day out at so little cost, than an automatic storage gas water heater. Piping hot water, ready to be used, at every fixture in your home at the same time.

Without forethought about your hot water needs for tonight, tomorrow, wash day or any other day—whenever you *want* hot water—turn on the faucet—that's all.

The Modern Home is *Lovekin*-ized

Think of the difference it will make in your home—the convenience for the occasional guest, and what a wonderful relief it is where there are children to be cared for. Always that pleasant feeling of satisfaction, knowing that hot water is there at your service.

Best of all, such a heater does not demand your constant time and attention. The numerous trips up and down the cellar stairs are at last happily ended. Your family is never without hot water because the fire in the coal water heater went out. There is no fire to build or "nurse." No ashes, dirt or bother.

Instead, a dependable hot water system that does not require even the lighting of a match to maintain.

Costs no more to operate

You will find a Lovekin Storage Heater costs no more to operate than troublesome out-of-date methods. In fact, many owners claim the *Lovekin* is actually cheaper to operate than the coal-stove or small tank-heater methods of heating water.

A *Lovekin*-ized home has a regular, nominal cost per month instead of the less occasional, but heart-breaking cost of several tons of coal. Coal only seems cheaper because, once paid for, its cost is forgotten. The following chart attempts to visualize this.

HOT WATER is always on tap

There will also be a great economy, in labor-saving and waiting, which in the long run will soon return

The Modern Home is *Lovekin*-ized

the initial cost of the *Lovekin*. Of course, during all this time, you are enjoying the benefits that only the *Lovekin* can give because of its time-proven dependability.

Inspect and compare the *Lovekin*

The simple, sturdy construction of the *Lovekin*, the experience and reputation of its makers, are your guarantee that it will continue to give all the hot water you need for years. Thousands of satisfied *Lovekin* users recommend it as the ideal hot water system. Your personal inspection of the *Lovekin* at

No waiting, fussing or worrying
about hot water on wash days.

HOT WATER is always on tap

work in our show rooms, or installed in a home, will convince you that *your* hot water system should be *Lovekin-ized*.

Go to your gas company, or any good plumber; either will gladly show you the *Lovekin* and give you the cost of *Lovekin-izing* your home.

Supremacy features

Storage System. Full flow of water. Ready when you need it. Economy of operation. Ease of installation. A size for every need.

Gas Economy. Maximum heat value of gas retained by *Lovekin* construction. More hot water per cubic foot of gas.

Automatic. Tried and proved Sylphon Thermostat. Positive action. Safe, reliable. *Hot water* always on tap.

Simplicity. No coils, no cast iron or brass sections. No unnecessary parts to wear out, break, or leak. Long life.

Boiler. Tank extra heavy, galvanized iron. Rust proofed. Strong, durable.

Air Cell Asbestos Insulation. Combines two non-conductors of heat—*asbestos* and non-circulating air. Keeps the cold out and the heat in.

Highly Recommended. Endorsed by thousands of users and by Good Housekeeping Institute and The

The Modern Home is *Lovekin*-ized

Tribune Institute. Unquestioned tribute to *Lovekin* reliability.

Specification Suggestions

Sizes and Approximate Capacities	For Houses with	Water Connection	Gas Supply	Flue Connection	*Standard Headroom	Headroom on Special Order Only	Minimum Width	Average Weight Uncrated Lbs.
22	1 Bath	$\frac{3}{4}$ "	$\frac{1}{2}$ "	3"	5' 8"	5' 0 $\frac{1}{2}$ "	18"	210
28	1 or 2 Baths	$\frac{3}{4}$ "	$\frac{1}{2}$ "	3"	6' 4"	6' 0 $\frac{1}{2}$ "	18"	250
35	2 Baths	$\frac{3}{4}$ "	$\frac{1}{2}$ "	3"	6' 4"	6' 0 $\frac{1}{2}$ "	21"	260
45	2 or 3 Baths	1"	$\frac{1}{2}$ "	3"	6' 6"	6' 4"	22"	300
60	Upward	1"	$\frac{1}{2}$ "	3"	6' 6"	6' 4"	25"	350
75	Upward	1"	$\frac{1}{2}$ "	3"	7' 6"	7' 4"	25"	400

*NOTE: Headroom on No. 22 can be made 5' 4" by specifying an angle draft hood instead of the standard straight draft hood when ordering heater.

The sizes selected should also be governed by the number of persons in the household, etc.

Lovekin engineers are always at your service in working out size specifications for individual plans or operations.

Installation Suggestions

Place in basement or laundry as close as convenient to faucets most frequently used, generally the kitchen faucet, and at the same time near enough to a chimney to avoid long runs of flue pipe.

Connect $\frac{1}{2}$ " gas line to heater from nearest point to heater, and cold and hot water as with a range boiler.

HOT WATER is always on tap

Place a gas shut off valve on gas line and a valve on cold water line to heater.

*What others say

"I consider my *Lovekin* much more satisfactory than any other method of water heating I have ever tried."

"I have a \$2000 heating system in my home, and many other expensive features, but I would give up any of them in preference to my *Lovekin*."

"We always have plenty of hot water now, and it does not cost any more than my old coal stove did."

"My *Lovekin* has been in continuous use for over eight years. It has received no attention whatever, and has furnished all the hot water necessary for kitchen, baths, and laundry."

"I know I can always get plenty of hot water instantly. My *Lovekin* is indispensable."

"In comparing my gas bills for my *Lovekin* with those formerly paid while using a non-automatic type heater, I find they average about the same."
